Smart Questionnaires

Designed to simplify information collection

Openitem’s Questionnaire functionality enables communities, estates, and facilities to seamlessly collect, manage, and process information directly through the Openitem app. The system supports PRE-POPULATED INFORMATION such as personal details, ID numbers, medical aid information, indemnities, resident profiles, vehicle information, and other securely stored user data — reducing repetitive input while improving accuracy and efficiency. Dynamic form logic, calculations, conditional fields, uploads, declarations, and configurable workflows can easily be incorporated depending on operational requirements.
